## HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

**Reason for Allowance**

1. The following is an examiner's statement of reason for allowance: Claims 1-20 are allowed.

The present invention is directed of determining the accumulated phase difference between the input clock and the output clock of each module operating with a clock of nominal frequency but which is not synchronized with the clocks of the other module(s), transmitting the accumulated phase difference to the terminating module in the network, and utilizing the received accumulated phase difference at the terminating module to lock the output clock at the terminating module to the input clock at the source module.

Regarding claim 1, packet switched communications system for transmitting synchronous data from a source module to a terminating module, over a network, the network comprising plurality of modules interconnected via transmission links, each module in the network having a clock of nominal frequency that is not synchronized with the clocks of the other module(s) in the network and having a single input and one or more outputs of each module where all the outputs are phase locked to each other but are not synchronized with respect to the input, means for determining the accumulated phase difference between the input clock and the output clock of each module, means for transmitting the accumulated phase difference to the terminating module and means for utilizing the received accumulated phase difference at the terminating module to lock the output clock at the terminating module to the input clock at the source module

Regarding claim 6, a method of recovering clock signals in a packet switched communications network the network comprising a plurality of modules interconnected via transmission links, each module having a clock of nominal frequency that is not synchronized with the clocks of the other module(s), each module having a single input and one or more outputs, wherein all the outputs are phase locked to each other but are not synchronized with respect to the input, the method comprising the steps of determining the accumulated phase difference between the input clock and the output clock at each module, transmitting the determined accumulated phase difference to the terminating module and utilizing the received accumulated phase difference at the terminating network to recover the clock at the source module of the network.

The closet prior art Van der Putten et al. (US 6,327,273 B1) discloses of transporting an incoming clock signal with a known frequency over a network segment wherein transmission between a transmitter and a receiver operates synchronous to a local transmit clock signal which are synchronized, The transmitter measures the phase difference between the incoming clock signal and a reference clock signal obtained from the transmit clock signal. The measured phase difference is communicated to the receiver and used therein to generate a copy clock signal. Hayashi et al. (US 5,062,124) disclose a first communication device of the plurality of communication devices comprises a phase difference obtaining means for obtaining a phase difference between the reference clock and a master clock in the distributed communication system and a second communication device of the plurality of communication devices comprises a controlled oscillator means for receiving the output of the phase difference

obtaining means through the transmission line connecting the first and second communication devices, and outputting a master clock having a phase of which is controlled according to the output of the phase difference obtaining means so that the phase of the master clock is synchronized with the phase of the reference clock.

Dependent claims 2-5 and 7-20 are allowed since they depend on claims 1 and 6 respectively.

2. Any comments considered necessary by the applicant must be submitted no longer than the issue fee and, to avoid processing delay, Should preferably accompany the issue fee. Such submission should be clearly labeled "Comments on Statement of Reason of Allowance".

### ***Conclusion***

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. USP 5,140,611 (Jones et al.), USP 6,049,886 (Motoyama), USP 6,272,138 B1 (Weon), USP 6,661,811 B1 (Baker), US 5,524,029 (Takenaka et al.) and US 5,335,223 (Iino).
